Pain and Anxiety

Anxiety is closely related to pain, and each can make the other worse. Anxiety can add to memory or sleep problems. Anxiety may lead a person to believe that a bad outcome is likely or certain. This type of thinking is called “catastrophizing.”

Pain can change your thinking. Often, we have thoughts that we’re not fully aware of called “automatic thoughts”. They can influence our emotions and the things we do, even if we don’t realize it. Pain by itself or with depression, anxiety or PTSD can make people have more negative automatic thoughts. These thoughts can make people do things that may make their pain worse. A therapist who practices cognitive behavioral therapy can help change these thinking patterns.

I had a TBI and hurt my neck at the same time, but I still get nerve pain. Sometimes I get anxious about pain even when I’m not having any.

When I’m anxious or in pain it’s hard for me to think clearly and remember things.

...and just pretending that I don’t have anxiety and pain hasn’t helped much.

Where is the pasta?

Wow! You all manage your pain so well. I think mine makes my anxiety worse and I don’t know what to do.

Oh no! I panicked and forgot the most important thing!

Oh no! I think I’m forgetting something... the shopping list!

I know there were more things I needed...

I had a TBI and hurt my neck at the same time, but I still get nerve pain. Sometimes I get anxious about pain even when I’m not having any.

Finding What Works

Remember both pain and how to manage it are personal. Something that works for you may not work for someone else. Don’t be discouraged if you don’t find the right method to manage your pain right away. At the end of this factsheet there is a log that you can use to record your pain. Tracking your pain for two weeks and showing the log to your doctor is a great way to begin.

*You can find an activity log at the end of this comic.

Keeping an activity log, and going over it with your doctor is a great way to start.

Max, from the activity log I can tell that your pain is related to anxiety. Autogenic Relaxation can help you learn to control your pain and anxiety.

https://msktc.org/tbi
There’s another exercise that will help too. It’s called controlled breathing…

Tell yourself “My right arm is warm and heavy.”

Ok, what’s that?

Relaxing is a skill, it takes time to learn. Many people are able to reduce their pain and gain confidence as their ability grows.

I really do feel a difference, I wasn’t even aware of a lot of that tension.

A few minutes later…

Just like before, sit in a comfortable place with few distractions. Place one hand over your stomach and the other on your chest. Let your eyes close.

Tell yourself “My right arm is warm and heavy.”

My right arm is very heavy and warm.

Now feel that arm relax.

...I think it would be best if you made a routine of doing autogenic relaxation before bed every night and using it throughout the day as needed.

Repeat this exercise with your left arm, shoulders, jaw, back, right leg, and left leg.

Relaxing is a skill, it takes time to learn. Many people are able to reduce their pain and gain confidence as their ability grows.

I really do feel a difference, I wasn’t even aware of a lot of that tension.

A few minutes later…

Tell yourself “My right arm is warm and heavy.”

When you’re in pain, it can be helpful to think encouraging things to yourself. Grounding yourself with coping thoughts can help get through a stressful or painful time. It may be a good idea to make a list. Some examples are:

- “I know I can handle this.”
- “It could be worse.”
- “This is tough but I will survive.”
- “I am strong enough to do this.”
- “I have gotten through more difficult things.”

Later that same week...

On Demand Pain Management Strategy #3

COPING THOUGHTS - When you’re in pain, it can be helpful to think encouraging things to yourself. Grounding yourself with coping thoughts can help get through a stressful or painful time. It may be a good idea to make a list. Some examples are:

- “I know I can handle this.”
- “It could be worse.”
- “This is tough but I will survive.”
- “I am strong enough to do this.”
- “I have gotten through more difficult things.”

Now that I have some tools to manage pain, I worry about it less. Different things work for different people, you may have to try a few before you find the right one.

You can use the activity log at the end of this comic to track what causes your pain and how you manage it.

https://msktc.org/tbi
# Activity Log

You can use this log to track activities or events that may be related to pain. This log can also be used to record your pain management practice.
